Acoustic Camera Nor848A
New features v2.5.9

- Improved beamforming speed (about 10x faster) makes it possible for high resolution plot in live-mode as well as hi-res mode.
- New contour plotting function.
- Narrowband (adaptive) algorithm is made more adaptive and accurate.
- Changes to spectrogram (spectrogram now changes according to time-weighting and frequency-weighting used).
- Changes to RPM module (now able to select by rectangle in RPM spectrogram and get correct RPM and frequency range in main view).
- Plus a lot of other bug fixes and improvements.

New contour plot, easier to locate reflections and secondary sources
Narrowband algorithm (minimum variance) now more adaptive
